FML Record – Experiments

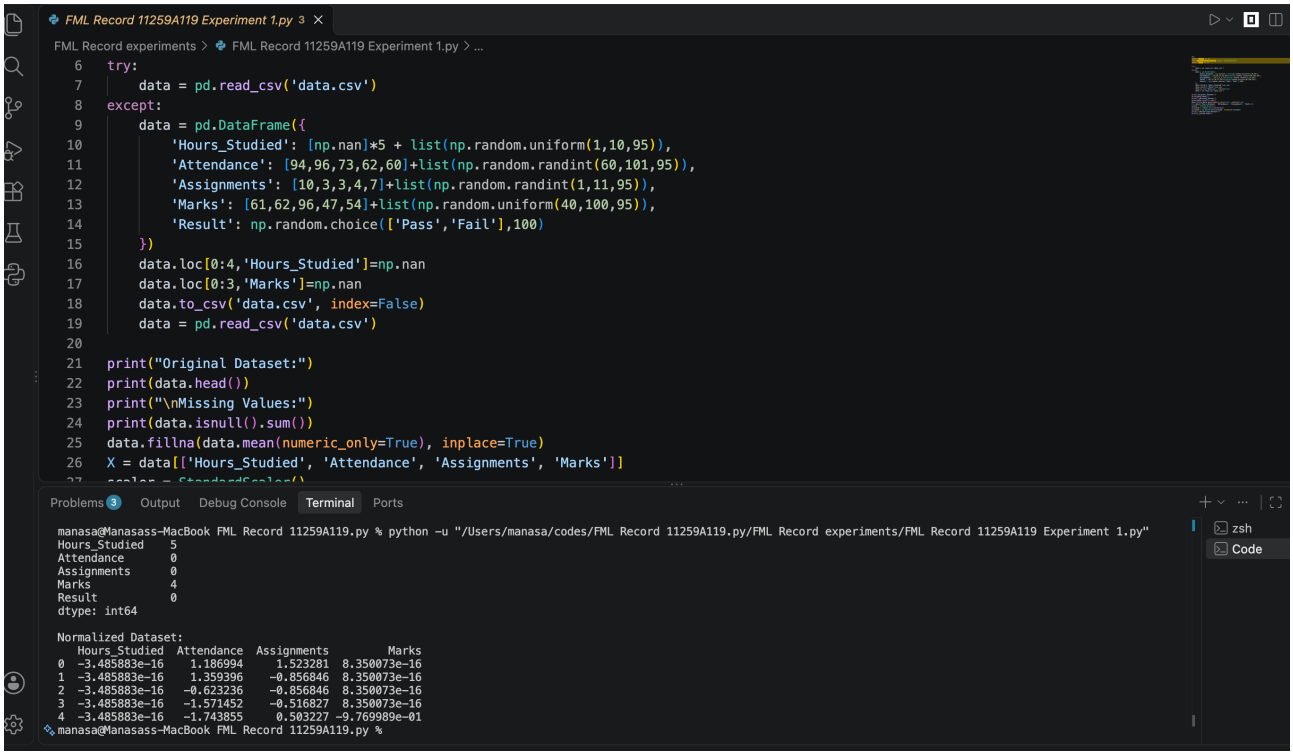

Experiment 1: Data Preprocessing in a Given Dataset

Aim:

To perform data preprocessing on a given dataset to prepare it for machine learning algorithms.

Algorithm:

1. Import the required libraries.
2. Load the dataset using Pandas.
3. Inspect the dataset for missing values and data types.
4. Handle missing values and remove duplicate records if necessary.
5. Encode categorical data and scale numerical features if required.
6. Separate the input features and target variable.
7. Verify the preprocessed dataset.

Result:Thus, data preprocessing was performed successfully, and the dataset was prepared for machine learning.
