Experiment 7: Hierarchical Clustering and Dendrogram

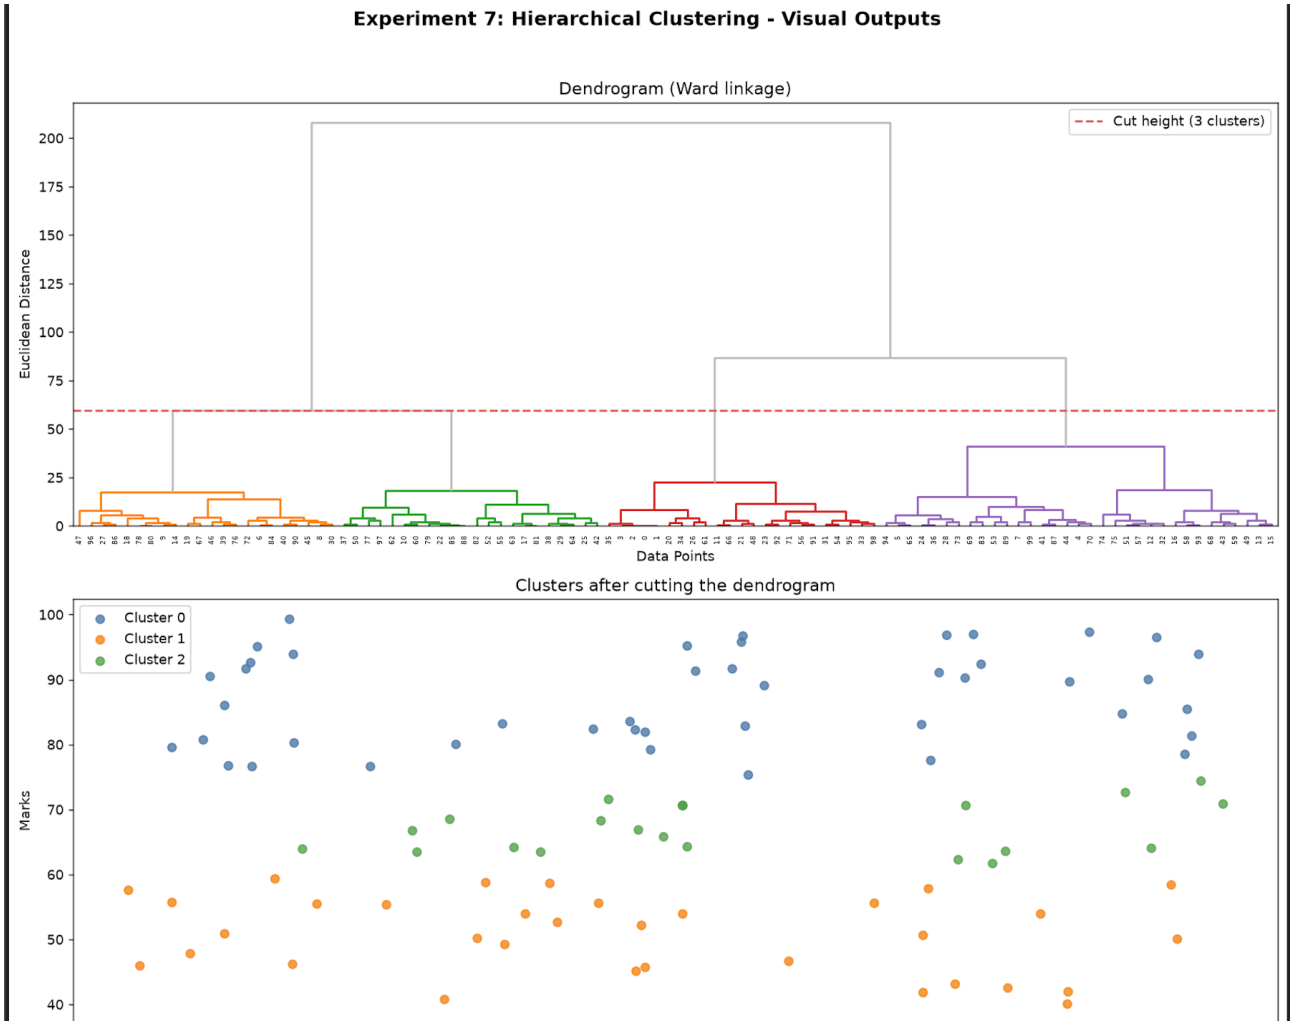

Aim:

To perform Hierarchical Clustering on the given dataset and visualize the cluster structure using a dendrogram.

Algorithm:

1. Import the required libraries.
2. Load the dataset and select the required features.
3. Calculate the linkage matrix using the Ward linkage method.
4. Plot the dendrogram to visualize the hierarchical relationships.
5. Apply Agglomerative Clustering with three clusters.
6. Assign cluster labels to the data points.
7. Visualize the resulting clusters.

Result:
Thus, Hierarchical Clustering was performed successfully, and the clusters were visualized using a dendrogram and a cluster plot.
