Experiment 9: AdaBoost Feature Importance

To implement an AdaBoost model and identify the importance of different features in the given
Aim:
dataset.
Algorithm:

1. Import the required libraries.
2. Load the dataset and separate the input features and target variable.
3. Create an AdaBoost model.
4. Train the model using the dataset.
5. Extract feature importance values using `feature_importances_`.
6. Display the feature importance values.
7. Plot a bar graph to visualize the relative importance of each feature.

Experiment 9: AdaBoost - Visual Outputs

Result:
Thus, the AdaBoost model was implemented successfully, and the importance of different features was identified and visualized using a bar graph.
